

Pop Up[®]

Disposable Cooking Thermometer

Description

The Pop Up[®] disposable cooking thermometer is the most accurate temperature indicator of its type in the world. Using patented organic firing mediums, the Pop Up[®] accurately indicates (within + or - 2°F) when poultry, meat, and fish items have reached their optimum level of doneness, thus eliminating the guesswork and assuring a perfectly cooked product each and every time. Volk Enterprises has a Pop Up[®] to fit just about any type of food item, with products ranging in temperature from 138°F to 203°F.

Features

Accurate Temperature Measurement

Every Pop Up[®] is calibrated to activate within + or - 2°F of a precise temperature ranging from 138°F to 203°F. Both foodservice and novice home cooks can prepare meats, poultry, and fish to perfection.

Improves Product Quality and Consistency

By accurately gauging and indicating when a food item has reached its optimum internal temperature, the cook can be assured that their meal has been cooked properly each and every time.

Improves Food Safety

The Pop Up[®] disposable cooking thermometer accurately determines the optimum temperature for cooking and serving meats, poultry, and seafood, thus assuring the cook that their food item has reached a food-safe temperature.

Easy to Insert

The Pop Up[®] disposable cooking thermometer is easy to insert into any product. The ease of use makes it simple to add value to your product, ensuring repeat sales and increased customer satisfaction.

Applications

The Pop Up[®] disposable cooking thermometer is available in a wide range of temperatures and is a perfect fit for a variety of food applications.
